

Bosch CV products now available from CV Logix

The bigger the engine, the greater the power but, when it comes to commercial vehicles, reliability is key. Every minute that a truck is off the road, and in need of repair, costs the operator money and as a result, high quality work drives customer loyalty. Fit and forget products are highly favoured thanks to the reliability of the replacement, providing the peace of mind to get a vehicle back on the road.

Replacement parts need to be engineered to withstand everything from sub-zero conditions to high temperature environments. Despite the tough conditions these vehicles face, their components and parts must remain reliable, which is why so many choose Bosch products.

The products available from CV Logix include: rotating electrics, diesel injectors and pumps, sensors, comfort electrics, wiper blades, and steering systems components.

Although operators will want to minimise the time the vehicle is off the road, investing in routine maintenance can ultimately keep the vehicle on the road for longer. Checking for damage caused by winter weather – moisture, frost and salt – and refilling fluids, checking wiper blades, lighting and tires, can reduce the risk of breakdown by keeping the vehicle in top condition. When a more substantial part needs replacing, Bosch provides technologically superior and highly engineered solutions.

Bosch's CV starters and alternators combine the company's engineering knowhow with the flexibility to offer workshops the right solution for any repair. Like all Bosch starters, the new CV range ensures reliable starting in all weather conditions – a must for CV operations. With a high output of up to 10kW at 24V DC, and reliable performance down to -20°C, Bosch starters are used in diesel engines in displacements of up to 30 litres. Using high-quality components such as durable carbon brushes or conical contacts, these starters feature a very long service life, often exceeding 500,000 miles, thanks in part to the smooth, two-stage engagement of flywheel and starter opinion.

Sensors are indispensable for engine management, and Bosch provides a range of sensors to control and manage key functions. In 2016, Bosch celebrated forty years of Lambda sensors, and this crucial sensor has been popular for over four decades due to its reliability and availability for most

vehicle types. Unbeatable thanks to its long service life and optimum engine compatibility, a properly functioning lambda is critical for optimal fuel consumption and low pollutant emissions, ultimately saving the driver money and protecting the environment.

Steering systems are another example of safety-relevant components that need to be replaced by genuine parts. Independent truck workshops or fleet operators' workshops can offer maintenance and replacement of Bosch steering systems for all main commercial vehicles. Including both complete steering systems and components, Bosch also provides the replacement of these systems on older vehicles, using series-remanufactured replacements from Bosch exchange.

With a significant number of diesel vehicles on the road, it is important that these vehicles can be expertly serviced. Bosch offers just the right products and spare parts to enable a rapid, expert and economical servicing. Bosch exchange provides factory remanufactured products to the latest original equipment specifications, and only original equipment is used in the remanufacturing process, with a 100% change of all wearing components. Bosch diesel pumps and injectors offer over 800 part numbers covering 95% of Bosch common rail systems, allowing the vast majority of vehicles to benefit from the longer service life provided by Bosch exchange parts.

Bosch is a leading global supplier of technology and services to a wide variety of industries, including the automotive OEM market. The Bosch Automotive Aftermarket division provides the aftermarket and workshop concepts worldwide with a complete range of diagnostic and repair equipment and a wide range of replacement parts– from new and exchange parts to its accredited repair solutions – for passenger cars and commercial vehicles.

The Automotive Aftermarket division (AA) provides the aftermarket and repair shops worldwide with a complete range of diagnostic and repair shop equipment and a wide range of spare parts – from new and exchange parts to repair solutions – for passenger cars and commercial vehicles. Its product portfolio includes products made as Bosch original equipment, as well as aftermarket products and services developed and manufactured in-house. About 18,000 associates in 150 countries, as well as a global

logistics network, ensure that some 650,000 different spare parts reach customers quickly and on time. In its “Automotive Service Solutions” operations, AA supplies testing and repair-shop technology, diagnostic software, service training, and information services. In addition, the division is responsible for the “Bosch Service” repair-shop franchise, one of the world’s largest independent chains of repair-shops, with some 17,000 workshops. In addition, AA is responsible for more than 1,000 “AutoCrew” partners.

The Bosch Group is a leading global supplier of technology and services. It employs roughly 390,000 associates worldwide (as of December 31, 2016). The company generated sales of 73.1 billion euros in 2016. Its operations are divided into four business sectors: Mobility Solutions, Industrial Technology, Consumer Goods, and Energy and Building Technology. As a leading IoT company, Bosch offers innovative solutions for smart homes, smart cities, connected mobility, and connected manufacturing. It uses its expertise in sensor technology, software, and services, as well as its own IoT cloud, to offer its customers connected, cross-domain solutions from a single source. The Bosch Group’s strategic objective is to deliver innovations for a connected life. Bosch improves quality of life worldwide with products and services that are innovative and spark enthusiasm. In short, Bosch creates technology that is “Invented for life.” The Bosch Group comprises Robert Bosch GmbH and its roughly 440 subsidiaries and regional companies in some 60 countries. Including sales and service partners, Bosch’s global manufacturing and sales network covers nearly every country in the world. The basis for the company’s future growth is its innovative strength. At 120 locations across the globe, Bosch employs some 59,000 associates in research and development.
